Thanks for the heads up.

Any assistance we can provide would be a plus, whether it's technical advice or CI advice. DTSC's head of IT is coming down next week to look at a demo of our geoviewer.

I think they will appreciate anything we can offer. Dan

Dan - I spoke with Roger Kintz - DTSC LA today - word of Sophia's and my work at W Oakland has gotten to them in relationship to the Exide site. They're very interested and have many questions for us. I've suggested that we could provide technical assistance etc. This will likely involve face-to-face mtgs in LA and/or Sacto. I'm assuming we want to help DTSC but want to give you a heads up prior to committing too much. Let me you know thoughts, parameters, etc.

Could you call Roger please? You obviously know the case better than I do.

Hi Harry,
If possible, could you contact me when you have a moment regarding the AMCO project.
Looking forward to connecting-
Thank you,
Roger

Hi Harry
I am interested in the successful Oakland lead remediation project involving the Insitu use of fish bones. Could you please provide me some information on the project? We are looking at the applicability of this approach in regards to the Exide residential clean ups.
Also did the use of fish bones pose any challenges regarding long term stabilization?

Thank you
Roger
